Family Physician

*Date of publication: 4 Feb 2024*

Singapore Institute of Advanced Medicine (SAM) Holdings is proud to support **#WorldCancerDay** on Sunday, February 4, and help to **#CloseTheCareGap** through the early detection and accurate diagnosis to its patients by offering appropriate treatments to achieve better outcomes and quality of life.

The group does so in its mission of offering industry-leading and advanced technologies with a team of dedicated doctors and staff to enhance the standard of patient care.

Cancer can affect any of us no matter age, gender or race.

Our dedicated team of family physicians are able to engage patients in health promotion and health screening for early detection of cancer.

Early cancer detection can make a difference to increase the chances of successful treatment.

Multi-cancer early detection (MCED) screening test is an advancement in cancer screening available at SAM.

SAM provides a range of diagnostic services which include Ingenia 3.0T MRI, Digital X-ray, Spectral CT, Ultrasound, Digital Mammography, Digital PET/CT, Radiopharmaceuticals and Radionuclide Therapy.

Upon cancer detection, a dedicated group of specialists and other healthcare providers are able to provide a holistic care approach in care coordination with our proudly owned advanced technology of Proton beam therapy and photon radiation therapy as cancer treatment options.

The group is the first in Singapore to install the Varian ProBeam Compact system and the Halcyon Elite System, both by Varian Medical Systems Pacific.

**We are dedicated towards creating a future without cancer.**
