

GATOR PRIME KNEE SCREENING TEST \$140 +GST

Gator Prime is a non-invasive 15min KNEE SCREENING TEST that utilizes technology for accurate assessment of knee joint movement. The test device has been approved by Health Sciences Authority of Singapore.

With the use of Inertial Measurement Unit Sensors, the device is able to –

- 1) Measure Knee Range of Movement – assess flexibility
- 2) Enable Early Detection of Degenerative Knee Conditions eg Osteoarthritis so that early intervention is possible
- 3) Reveal Abnormal Walking patterns

Highly Recommended for the following groups–

- 1) Above 40 years of age
- 2) Knee discomfort / pain / stiffness
- 3) Previous knee injuries
- 4) Overweight
- 5) Repeated joint stress – from sports or jobs that require prolonged standing or kneeling movement
- 6) Lack of activity, poor posture

How is the test done?

- ★ Gator device is strapped onto the thigh and calf, on top of clothes
- ★ Do 10m fast walk
- ★ Do Standing Active Flexion
- The Gator device will record and measure the movements
- Personalized report and score will be generated for both knees
