

## **LUNGCLEAR BLOOD TEST FOR LUNG CANCER RISK \$250 +GST**

LUNGclear is a blood test that uses microRNA tumour markers to assess lung cancer risk. If the test score shows high risk of lung cancer, further evaluation using CT Thorax (Lungs) will be highly recommended, It avoids risk of radiation exposure.

With early detection, LUNGCLEAR allows patients to seek treatment early and have a higher chance of survival.

It is highly recommended for the following groups-

- 1) Above 40 years of age
- 2) Chronic cough
- 3) Smoking / Passive smoking
- 4) Job exposure to industrial hazards
- 5) Family history / Personal history of lung cancer
